week-10   Lab Program-7

Q.   Write a program to demonstrate generics with multiple object parameters.

CODE: class Genprog <T1, T2>
    {
        Genprog(T1 ob1, T2 ob2)
        {
            System.out.println(ob1 + " "+ ob2);
        }
    }
    class GenDemo
    {
    public static void main (String Args[])
    {
        Genprog t1=new Genprog <String, Integer>("Hello
                                    world", 20);
        Genprog t2=new Genprog <Integer, Float>(23,24)
        Genprog t3=new Genprog <integer, Character>
                                    (42,'s');
    }
    }
